

Ohio Administrative Code

Rule 1501-6-12 Determination of anticipated recession distances.

Effective: June 14, 1996

The anticipated recession distance in feet for each transect shall be the center-weighted moving average of distances equal to thirty times the annual recession rate in feet per year as determined at five consecutive transects where: (1) the distances for the two outer transects shall be weighted by a factor of one; (2) the distances for the two inner transects shall be weighted by a factor of three; and (3) the distance for the center transect shall be weighted by a factor of five (figure 1). Anticipated recession distances less than thirty times the calculated accuracy limit shall be equal to zero. In no case shall the anticipated recession distance be less than zero.
