(B) For purposes of this rule, height of dam is the vertical height, to the nearest foot, as determined by the division under section 1521.062 of the Revised Code. For purposes of this rule, length of the dam is the horizontal dimension as measured along the crest of the dam from natural abutment to natural abutment as determined by the division. Spillway systems over the dam but not in the abutment area are included in the length determination. For upground reservoirs the length is the continuous distance around the crest of the dam. For purposes of this rule, total storage volume impounded by the dam is the total volume of water or other liquefied material impounded when the pool level is at the top of the dam immediately before it is overtopped, to the nearest acre-foot with a maximum of seven thousand acre-feet, as determined by the division.
