

Ohio Administrative Code

Rule 1501:46-12-16 Use of devices to limit or reduce ice formation, permit required.

Effective: February 15, 2024

On any water area under the management authority of the division, no unauthorized subsurface mixer, submersible aerator, subaqueous device, or any other artificial means of preventing or limiting ice formation on the surface of the water may be installed or utilized without first receiving written permission from the area manager or the area manager's authorized representative. The chief will make available an application for permission to proceed with installation or utilization of such apparatus.

It may be necessary for the applicant to provide details regarding the location, type, size, maximum water area to be affected, and other information deemed to be critical in determining the suitability of the installation or use of any such apparatus. Any specific conditions for installing or utilizing such a device will be listed in the permit, if approved.

It is unlawful for any person to install a device as described above in violation of the provisions of this rule or in a manner inconsistent with the conditions of any permit issued under this rule.
