

Ohio Administrative Code

Rule 3745-51-732 Emission standards for process vents.

Effective: June 12, 2023

(A) The remanufacturer or other person who stores or treats hazardous secondary materials in hazardous secondary material management units with process vents associated with distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations managing hazardous secondary material with organic concentrations of at least ten parts per million by weight shall either:

(1) Reduce total organic emissions from all affected process vents at the facility below 1.4 kilograms per hour (kg/hr) [three pounds per hour (lb/hr)] and 2.8 Megagrams per year (Mg/yr) [3.1 tons per year (tons/yr)]; or

(2) Reduce, by use of a control device, total organic emissions from all affected process vents at the facility by ninety-five weight per cent.

(B) If the remanufacturer or other person who stores or treats the hazardous secondary material installs a closed-vent system and control device to comply with paragraph (A) of this rule the closed-vent system and control device shall meet the requirements of rule 3745-51-733 of the Administrative Code.

(C) Determinations of vent emissions and emission reductions or total organic compound concentrations achieved by add-on control devices may be based on engineering calculations or performance tests. If performance tests are used to determine vent emissions, emission reductions, or total organic compound concentrations achieved by add-on control devices, the performance tests must conform with the requirements of paragraph (C) of rule 3745-51-734 of the Administrative Code.

(D) When a remanufacturer or other person who stores or treats the hazardous secondary material and the director do not agree on determinations of vent emissions or emission reductions or total organic compound concentrations achieved by add-on control devices based on engineering
