\* Background ground water quality parameters shall be determined at least quarterly for the initial year of ground water monitoring.

Note 1: For both annual ground water monitoring parameters, and background ground water quality parameters, parameter numbers 3, 5, 7, 17, 20, 21, 23, and 25 (boron, calcium, chloride, molybdenum, potassium, selenium, sodium, and sulfate) are indicator parameters that shall be determined at least semi-annually.

Note 2: For background ground water quality parameters, only need to sample parameter numbers 9, 19, and 31 (cyanide, phenols, and volatile organic compounds listed in appendix A to this rule) for the initial quarter unless otherwise authorized by Ohio EPA.

Note 3: For both annual ground water monitoring parameters, and background ground water quality parameters, parameter numbers 16, 22, and 24 (pH, specific conductance, and temperature), shall be determined each time a monitoring well is sampled.

\* Background ground water quality parameters shall be determined at least quarterly for the initial year of ground water monitoring.

Note 1: Based on waste characterization, the owner or operator can select four (4) or more of the following parameters as indicator parameters: parameter numbers 7, 8, 10, 11, 15, 18, 20, and 23 (copper, fluoride, iron, lead, phenols (including cresols), sulfate, total dissolved solids, and zinc). The selected indicator parameters will be determined at least semi-annually. The remaining parameters will remain on the annual ground water monitoring parameters list.

Note 2: For background ground water quality parameters, only need to sample parameter number 22a (volatile organic compounds listed in appendix A to this rule) for the initial quarter unless otherwise authorized by Ohio EPA.

Note 3: For both annual ground water monitoring parameters and background ground water quality parameters, parameter numbers 14, 17, and 19 (pH, specific conductance, and temperature), shall be determined each time a monitoring well is sampled.
